Office Action Summary

S.N. 09/723,064  
Au 1623

Claims 18-21 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for fighting infection, counteracting inflammation and reducing fever, does not reasonably provide enablement for the treatment of an animal for any condition. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The terminology "any salt of oxytetracycline" renders claim 2 indefinite because it is not clear what is encompassed by said terminology. Such terminology as "a salt of oxytetracycline" can be used to overcome the rejection.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 6-7 and 16-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Grimberg (U.S. Patent No. 5,151,270).

Grimberg discloses a composition containing an antibiotic such as oxytetracycline, an analgesic such as dexamethasone (column 3, lines 11-16), a preservative (column 3, line 39) and

solvent such as distilled water (column 4, line 17), a method of making said composition and a method of treating an animal with the said composition. The claimed composition and method are anticipated by Grimberg.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Grimberg (U.S. Patent No. 5,151,270) in combination with Plumb (submitted by applicant).

Grimberg discloses a composition containing an antibiotic and an analgesic and a method of treating an animal with said composition but does not disclose specific antibiotics and analgesics encompassed by the instant claims. However, since specific antibiotics and analgesics encompassed by the instant claims were well known in the art at the time the instant invention was made, a person having ordinary skill in the art at the time the instant invention was made would have been motivated to combine various antibiotics and analgesics into a single composition because the results obtained from such a combination would have been expected. The claimed compositions and methods are deemed prima facie over Grimberg in combination with Plumb.
